As your mind changes, your brain changes.

Immaterial mental activity co-occurs with, correlates with material neural activity.

This produces temporary changes in your brain and lasting ones. Temporary changes include:

- Alterations in brainwaves (= changes in the firing patterns of synchronized neurons)
- Changing consumption of oxygen and glucose
- Ebbs and flows of neurochemicals

New Scientist, 5/11/11, study by Barry Kemsaruk, et al. [red = activation; A = PFC; B = ACC]
Mind Changes Brain in Lasting Ways

- What flows through the mind sculpts your brain. Immaterial experience leaves material traces behind.
- Increased blood/nutrient flow to active regions
- Altered epigenetics (gene expression)
- “Neurons that fire together wire together.”
  - Increasing excitability of active neurons
  - Strengthening existing synapses
  - Building new synapses; thickening cortex
  - Neuronal “pruning” - “use it or lose it”

You can use your mind
to change your brain
to change your mind for the better.

This is self-directed neuroplasticity.

Your Loving Nature

Evolutionary History

Nerve cells form complete circuits that carry and transform information.

Electrical signaling represents the language of mind.

All animals have some form of mental life that reflects the architecture of their nervous system.

Eric R. Kandel, 2006
The Social Brain

- Social capabilities have been a primary driver of brain evolution.
- Reptiles and fish avoid and approach. Mammals and birds attach as well - especially primates and humans.
- Mammals and birds have bigger brains than reptiles and fish.
- The more social the primate species, the bigger the cortex.
- Since the first hominids began making tools ~ 2.5 million years ago, the brain has roughly tripled in size, much of its build-out devoted to social functions (e.g., cooperative planning, empathy, language). The growing brain needed a longer childhood, which required greater pair bonding and band cohesion.

All sentient beings developed through natural selection in such a way that pleasant sensations serve as their guide, and especially the pleasure derived from sociability and from loving our families.

Charles Darwin
In the cherry blossom’s shade
there is no thing
as a stranger

Issa
If there is anything I have learned about [people], it is that there is a deeper spirit of altruism than is ever evident.

Just as the rivers we see are minor compared to the underground streams, so, too, the idealism that is visible is minor compared to what people carry in their hearts unreleased or scarcely released.

(Hu)mankind is waiting and longing for those who can accomplish the task of untying what is knotted, and bringing these underground waters to the surface.

Albert Schweitzer
Two Wolves in the Heart

Core evolutionary strategy: within-group cooperation, and between-group aggression.

Both capacities and tendencies are hard-wired into our brains, ready for activation. And there is individual variation.

Our biological nature is much more inclined toward cooperative sociability than toward aggression and indifference or cruelty. We are just very reactive to social distinctions and threats.

That reactivity is intensified and often exploited by economic, cultural, and religious factors.

Two wolves in your heart:
- Love sees a vast circle in which all beings are “us.”
- Hate sees a small circle of “us,” even only the self.

Which one will you feed?

In between-family fights, the baboon’s ‘I’ expands to include all of her close kin; in within-family fights, it contracts to include only herself.

This explanation serves for baboons as much as for the Montagues and Capulets.

Dorothy Cheney and Robert Seyfarth

Negativity Bias: Causes in Evolution

“Sticks” - Predators, natural hazards, social aggression, pain (physical and psychological)

“Carrots” - Food, sex, shelter, social support, pleasure (physical and psychological)

During evolution, avoiding “sticks” usually had more effects on survival than approaching “carrots.”
- Urgency - Usually, sticks must be dealt with immediately, while carrots allow a longer approach.
- Impact - Sticks usually determine mortality, carrots not; if you fail to get a carrot today, you’ll likely have a chance at a carrot tomorrow; but if you fail to avoid a stick today - whap! - no more carrots forever.

A Major Result of the Negativity Bias: Threat Reactivity

Two mistakes:
- Thinking there is a tiger in the bushes when there isn’t one.
- Thinking there is no tiger in the bushes when there is one.

We evolved to make the first mistake a hundred times to avoid making the second mistake even once.

This evolutionary tendency is intensified by temperament, personal history, culture, and politics.

Threat reactivity affects individuals, couples, families, organizations, nations, and the world as a whole.

Results of Threat Reactivity (Personal, Organizational, National)

Our initial appraisals are mistaken:
- Overestimating threats
- Underestimating opportunities
- Underestimating inner and outer resources

We update these appraisals with information that confirms them; we ignore, devalue, or alter information that doesn’t.

Thus we end up with views of ourselves, others, and the world that are ignorant, selective, and distorted.
A Poignant Truth

Mother Nature is tilted toward producing gene copies.

But tilted against personal quality of life.

And at the societal level, we have caveman/cavewoman brains armed with nuclear weapons.

What shall we do?

We can deliberately use the mind to change the brain for the better.

Coming Home . . .

Calm

Contentment

Caring

Feeding the Wolf of Love

- Focus on similarities between “us” and “them.”
- Consider others as young children.
- Notice good things about neutral or unpleasant people.
- Bring to mind the sense of someone who cares about you.
- Keep extending out the sense of “us” to include everyone.
- Consider others as your mother or dear friend in a past life.
- Restraint about over-identifying with “us”
- Reflect on the suffering of so many people in the world.
- Self-generate feelings of kindness and love.

What Is Empathy?

- It is sensing, feeling, and understanding how it is for the other person. In effect, you simulate his or her inner world.
- It involves (sometimes subtly) all of these elements:
  - Bodily resonance
  - Emotional attunement
  - Conceptual understanding
- Empathy is usually communicated, often tacitly.
- We can give empathy, we can receive it, and we can ask for it.
If we could read the secret history of our enemies, we should find in each person's life sorrow and suffering enough to disarm any hostility.

Henry Wadsworth Longfellow

Neural Substrates of Empathy

- Three simulating systems:
  - Actions: "mirror" systems; temporal-parietal
  - Feelings: resonating emotionally; insula
  - Thoughts: "theory of mind"; prefrontal cortex

- These systems interact with each other through association and active inquiry.

- They produce an automatic, continual re-creation of aspects of others' experience.

Empathy Skills

- Pay attention.
- Be open.
- Read emotion in face and eyes.
- Sense beneath the surface.
- Drop aversion (judgments, distaste, fear, anger, withdrawal).
- Investigate actively.

- Express empathic understanding:
  - Reflect the content
  - Resonate with the tone and implicit material
  - Questions are fine
  - Offer respect and wise speech throughout

Reflections about Empathy

- You're more likely to get empathy if you're:
  - Open, present
  - Honest, real, authentic
  - Reasonably clear
  - Responsible for your own experience
  - Taking it in when you feel felt

- Empathy can be negotiated:
  - Name it as a topic in the relationship
  - Follow NVC format: "When X happens, I feel Y, because I need Z. So I request ______ ."
  - Stay with it.

Compassion and Lovingkindness
A human being is a part of a whole, called by us "universe," a part limited in time and space. He experiences himself, his thoughts and feelings as something separated from the rest... a kind of optical delusion of his consciousness. This delusion is a kind of prison for us, restricting us to our personal desires and to affection for a few persons nearest to us. Our task must be to free ourselves from this prison by widening our circle of compassion to embrace all living creatures and the whole of nature in its beauty.

Albert Einstein

Oxytocin

- It promotes bonding between parents and children - and between mates and friends, keeping kids alive
- In women, it triggers the let-down reflex in nursing, and tend-and-befriend behaviors during stress.
- In both sexes, it dampens the stress response; it feels pleasurable, relaxed, a “rightness.”
- It is stimulated by:
  - Physical contact (especially skin to skin)
  - Moving together harmoniously (e.g., dancing)
  - Warm feelings of rapport or love, devotion
  - Imagination of these
  - Nipple stimulation
  - Orgasm

The Buddha’s Words on Lovingkindness

Wishing: In gladness and in safety, may all beings be at ease.

Omitting none, whether they are weak or strong, the great or the mighty, medium, short, or small, the seen and the unseen, those living near and far away, those born and to-be-born: May all beings be at ease.

Let none through anger or ill-will wish harm upon another. Even as a mother protects with her life her child, her only child, so with a boundless heart should one cherish all living beings; radiating kindness over the entire world: spreading upwards to the skies, and downwards to the depths, outwards and unbounded, freed from hatred and ill-will.

One should sustain this recollection.

This is said to be the sublime abiding.

Lovingkindness Practice

- Types of wishes
  - Safety
  - Health
  - Happiness
  - Ease

- Types of beings
  - Self
  - Benefactor
  - Friend
  - Neutral
  - Difficult

- Continually “omitting none” in all directions

If you let go a little, you will have a little happiness.

If you let go a lot, you will have a lot of happiness.

If you let go completely, you will be completely happy.

Ajahn Chah
So that all cubs are our own . . .
So that all beings are our clan . . .
All life, our relatives . . .
The whole earth, our home . . .

May you know love, joy, wonder, and wisdom, in this life, just as it is.

Thank you!
